

OTL LENS LAB
YOUR RELIABLE OPTICAL LAB

Introducing an Innovative Coating Filter Designed for Superior Performance

i-Lax[®]
Unwind • Restore • Realign

WHAT IS *i-Lax*: A specialised therapeutic lens featuring a precision coating filter. Originally based on the historic FL-41 formulation, we've optimized the tech for modern life. Unlike standard blue-blockers, *i-Lax* specifically blocks the high-energy blue-green light that irritates the trigeminal nerve and triggers migraines.

Indoor Clarity: Not too dark for office use

Targeted Filter: Blocks only the "pain" spectrum

Who is it for?

- Chronic Migraine Sufferers
- Post-Concussion Syndrome
- Blepharospasm (Eye twitching)
- Night Drivers (with anti-glare)
- Office Professionals

The Benefits of *i-Lax*

Migraine Prevention: Users report up to 74% fewer light - triggered migraine per day.

Eye Relief: Instant ease when looking at high-brightness monitors and devices.

Office Comfort: Makes harsh industrial lighting tolerable for long shifts.

Ocular Health: Reduces squinting, helps in preventing crow's feet and tension headaches.

How It Works

Ocular Shield

Thalamic Relay

Flicker Control

Sunglasses aren't the fix

Wearing dark sunglasses indoors cause "chronic dark adaption". This makes your eye more sensitive over time, worsening the condition.

The Migraine Trigger

80% of migraine sufferers report photophobia. Specific wavelengths from fluorescent bulbs and screens overstimulate the sensory relay centers of the brain.
